

IN THE CLAIMS

1. (currently amended) An improved reversible zipper fly cover comprising:
a zipper having a first zipper flap opposite a second zipper flap;
a first panel connected to said first zipper flap and attached by a finished seam;
a second panel connected to said second zipper flap and attached by a finished seam;
~~an inner~~ a first fly cover flap formed by attaching said first zipper flap to said first panel
by a first fly cover finish seam;
~~an outer~~ a second fly cover flap formed by attaching said second zipper flap to said
second panel by a second fly cover finish seam,
wherein said reversible zipper fly cover is symmetric ~~whether formed “inside” or~~
~~“outside”~~ so that each of said first and second fly cover flaps can be used as the outside of said
reversible zipper fly cover.

2 –4 (canceled)

5. (currently amended) A method for producing a zipper fly cover, said method
comprising the steps of :
a. Connecting a first panel to a ~~second panel via an otherwise conventional~~
~~reversible zipper by formation of a first panel zipper flap attached to the first panel~~ by a first
finished seam;
b. Connecting a second panel ~~similarly prepared by formation of~~ to a second panel
zipper flap ~~attached to the second panel~~ by a second finished seam;
c. Attaching a first attachment strip of a reversible zipper to said first panel zipper
flap, in a manner offset from an outer edge, by ~~an~~ a first attachment seam;
d. Attaching a second attachment strip of the reversible zipper to ~~the said~~ second
panel zipper flap, in ~~an offset~~ a manner offset from an outer edge, by a ~~similar~~ second attachment
seam;
e. Forming ~~an inner~~ a first fly cover flap by attaching the first panel zipper flap to
the first panel by a first fly cover finish seam; and
f. Forming ~~an outer~~ a second fly cover flap by attaching the second panel zipper flap
to the second panel by a second fly cover finish seam.

6. (currently amended) The method of Claim 5, further comprising the step of forming a crotch seam ~~extended~~ extending laterally downward.

7. (new) A reversible garment with a reversible fly, comprising:
a first fly cover flap attached to a first side of the reversible garment,
a second fly cover flap attached to a second side of the reversible garment, the second fly cover flap having the same shape as the first fly cover flap, and
a zipper having a reversible traveler guide located between the first and second fly cover flaps,
wherein the reversible fly is symmetric so that each of the first and second sides of the garment can be used as the outside of the garment.

8. (new) The reversible garment of claim 7, wherein the reversible traveler guide can be positioned to be accessible from each of the first and second sides of the garment.
